UNE PREUVE EST SUITE D'*ACTES*

a mathematical proof is described as a succession of acts and these acts are described as reactions to the occurrence of a particular situation (the presence of a certain evidence) […]

[…]

Once we understand **a mathematical proof as a succession of human acts**, the problem of its justification seems mech less mysterious than when we understand a mathematical proof as a chain of sentences or statements which necessarily imply each others, and wonder how to justify such a necessity.
