F Substitution theorems for $BI^{\mu\nu}$ general

Theorem 10. *If $[\![Y]\!]_\rho$ and $[\![P]\!]_{[\rho|X_v\to[\![Y]\!]_\rho]}$ exist then*

$$[\![P]\!]_{[\rho|X_v\to[\![Y]\!]_\rho]} = [\![P\{Y/X_v\}]\!]_\rho$$

Proof (Theorem 10). By induction on the formula P.

- Case P as the form $E = E'$, $E \mapsto E_1, e_2$, `false`, `emp`
  $P\{Y/X_v\} = P$ and $\forall\rho.[\![P]\!]_\rho = [\![P]\!]$ so
  $[\![P]\!]_{[\rho|X_v\mapsto[\![Y]\!]_\rho]}$
  $= [\![P]\!]$
  $= [\![P\{Y/X_v\}]\!]$

□

Lemma 8. *If* $[\![Y]\!]_\rho$ *exists*

$$sp(P,C)\{Y/X_v\} = sp(P\{Y/X_v\},C)$$

Proof (Lemma 8). Proof by induction on C.

– Case $x := E$
$(sp(P,C)\{Y/X_v\})$
$= (\exists x'.P[x'/x] \wedge x = E[x'/x])\{Y/X_v\}$
$= (\exists x'.(P\{Y/X_v\})[x'/x] \wedge x = E[x'/x])$
$= sp(P\{Y/X_v\},C)$
– Case $x := E.i$
$(sp(P,C)\{Y/X_v\})$
$= (\exists x'.P[x'/x] \wedge x = (E[x'/x].i))\{Y/X_v\}$
$= (\exists x'.(P\{Y/X_v\})[x'/x] \wedge x = (E[x'/x].i))$
$= sp(P\{Y/X_v\},C)$

– Case $E.1 := E'$

$(sp(P, C)\{Y/X_v\})$
$= (\exists x_1, x_2.(E \mapsto E', x_2) * ((E \mapsto x_1, x_2) \mathrel{-\!\!*} P)\{Y/X_v\}$
$= (\exists x_1, x_2.(E \mapsto E', x_2) * ((E \mapsto x_1, x_2) \mathrel{-\!\!*} (P\{Y/X_v\}))$
$= sp(P\{Y/X_v\}, C)$

– Case $E.2 := E'$

$(sp(P, C)\{Y/X_v\})$
$= (\exists x_1, x_2.(E \mapsto E', x_2) * ((E \mapsto x_1, x_2) \mathrel{-\!\!*} P)\{Y/X_v\}$
$= (\exists x_1, x_2.(E \mapsto x_1, E') * ((E \mapsto x_1, x_2) \mathrel{-\!\!*} (P\{Y/X_v\}))$
$= sp(P\{Y/X_v\}, C)$

– Case $x := \texttt{cons}(E_1, E_2)$

$(sp(P, C)\{Y/X_v\})$
$= \exists x'.(P[x'/x] * (x \mapsto E_1[x'/x], E_2[x'/x]))\{Y/X_v\}$
$= \exists x'.((P\{Y/X_v\})[x'/x] * (x \mapsto E_1[x'/x], E_2[x'/x]))$
$= sp(P\{Y/X_v\}, C)$

– Case $dispose(E)$

$(sp(P, C)\{Y/X_v\})$
$= \exists x_1, x_2.\ ((E \mapsto x_1, x_2) \mathrel{-\!\!*} P)\{Y/X_v\}$
$= \exists x_1, x_2.\ ((E \mapsto x_1, x_2) \mathrel{-\!\!*} (P\{Y/X_v\}))$
$= sp(P\{Y/X_v\}, C)$

– Case $C_1; C_2$

$(sp(P, C)\{Y/X_v\})$
$= sp(sp(P, C_1), C_2)\{Y/X_v\}$
$= sp(sp(P, C_1)\{Y/X_v\}, C_2)$ (ind.hyp)
$= sp(sp(P\{Y/X_v\}, C_1), C_2)$ (ind.hyp)
$= sp(P\{Y/X_v\}, C)$

– Case $if\ E\ then\ C_1\ else\ C_2$

$(sp(P, C)\{Y/X_v\})$
$= (sp(P \wedge E = \texttt{true}, C_1) \vee sp(P \wedge E = \texttt{false}, C_2))\{Y/X_v\}$
$= sp(P \wedge E = \texttt{true}, C_1)\{Y/X_v\} \vee sp(P \wedge E = \texttt{false}, C_2)\{Y/X_v\}$
$= sp(P\{Y/X_v\} \wedge E = \texttt{true}, C_1) \vee sp(P\{Y/X_v\} \wedge E = \texttt{false}, C_2)$ (ind. hyp.)
$= sp(P\{Y/X_v\}, C)$

– Case `skip`

$(sp(P, C)\{Y/X_v\})$
$= P\{Y/X_v\}$
$= sp(P\{Y/X_v\}, C)$

– Case $while\ E\ do\ C_1$

Case X_v not free in P

$(sp(P, C)\{Y/X_v\})$
$= ((\mu X_v.sp(X_v \wedge E = \texttt{true}, C_1) \vee P)\ \wedge\ (E = \texttt{false}))\{Y/X_v\}$
$= ((\mu X_v.sp(X_v \wedge E = \texttt{true}, C_1) \vee P)\ \wedge\ (E = \texttt{false}))$
$= ((\mu X_v.sp(X_v \wedge E = \texttt{true}, C_1) \vee P\{Y/X_v\})\ \wedge\ (E = \texttt{false}))$
$= sp(P\{Y/X_v\}, C)$

Case X_v free in P

$(sp(P, C)\{Y/X_v\})$
$= ((\mu Z_v.sp(Z_v \wedge E = \texttt{true}, C_1) \vee P) \ \wedge \ (E = \texttt{false}))\{Y/X_v\}$
$= ((\mu Z_v.sp(Z_v \wedge E = \texttt{true}, C_1) \vee P\{Y/X_v\}) \ \wedge \ (E = \texttt{false}))$
$= ((\mu W_v.sp(W_v \wedge E = \texttt{true}, C_1) \vee P\{Y/X_v\}) \ \wedge \ (E = \texttt{false}))$
$= sp(P\{Y/X_v\}, C)$
We have the egality between the case Z_v and W_v since $[\![Y]\!]_\rho$ exists so there is no free formula variables in Y, so neither Z_v or W_v can become bounded in some Y placed in P.
